Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Information Disclosure Statement*

1. The information disclosure statement filed with the application recites a patent number 6344715, which is not relevant to this application and has not been considered. The name (So et al.), date (1-12-020 and class/subclass does not match with the patent number.

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-5, 8-11, 13-16, 18-20, 23, 26 and 29-30 are rejected under 35

U.S.C. 102(b) as being anticipated by Underwood et al (5737464).

Underwood (Figures 1-7) shows an optical fiber module having a housing with a first end 22 and a second end 22; an optical fiber extending through a passageway in the housing; and the two ends of the housing mating with an internal and external assembly (not shown). The housing has an internal portion with first end and second end and an external portion with a first end and a second end and an intermediate portion with a first end and a second end joined together by clips 34. Figures 3-4 show a spacer 92 as an intermediate portion made integral with the end portions. Ferrules 14 are placed at least partially within the spacer. The intermediate portion has flanges at two sides made integral with end walls of the internal and external portion. Underwood shows a sleeve 20 with a portion positioned on an internal ferrule and a portion positioned on an external ferrule. The

flange and end walls of the internal and external portion define a mounting aperture.

Underwood further shows a mounting panel formed by end walls of two portions 32.

4. Claims 32-33 are rejected under 35 U.S.C. 102(b) as being anticipated by Roth (6079881).

Roth (Figure 2) shows a shutter 36 with a thumb latch for covering a plurality of passageways of an optical fiber module.

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 12, 21-22, 27 and 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Underwood et al. (5737464).

Underwood shows all the features of these claims as described in Paragraph 2 above except sizes of the end wall and the flanges, the spacer to float in the passageway and a plurality of passageways. The instant invention does not provide any reasons or specific problem to be solved by these features. These features are well known in the art of optical fiber connectors. It would have been obvious to one having ordinary skill in the art at the time of the instant invention to provide these features to Underwood's optical module because these would require a mere change in size, a duplication and relation of an essential part which involve only routine skill in the art.

7. Claims 6-7, 17, 24, 25 and 28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Underwood et al. (5737464).

Underwood shows all the features of these claims as described in Paragraph 2 above except sizes of the end wall and the flanges, the spacer to float in the passageway and a plurality of passageways. The instant invention does not provide any reasons or specific problem to be solved by these features. These features are well known in the art of optical fiber connectors. It would have been obvious to one having ordinary skill in the art at the time of the instant invention to provide these features to Underwood's optical module because these would require a mere change in size, a duplication and relation of an essential part which involve only routine skill in the art.

**Conclusion**

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Lu (6296398), Underwood (5359688).
